

Lightweight Construction Identification

Identify areas that are known to have lightweight construction components within your still district.

- List the characteristics of this type of building construction.
- What features are present from the outside of the building.
- How does this construction differ from traditional construction methods.

- Review any department SOG relating to operations at these occupancies.

Identify and/or define the following terms:

-Rafter

-Joist

-Ridge Board

-Gussett plate or connecting plate

-Identify the types of materials being used in the construction process
